## How to Record Web Audio/Radio

The Record Audio feature acts just like a tape recorder. Anything you are listening to can be captured in real time. Here's how to record audio using **Free Online Radio Player Recorder**:

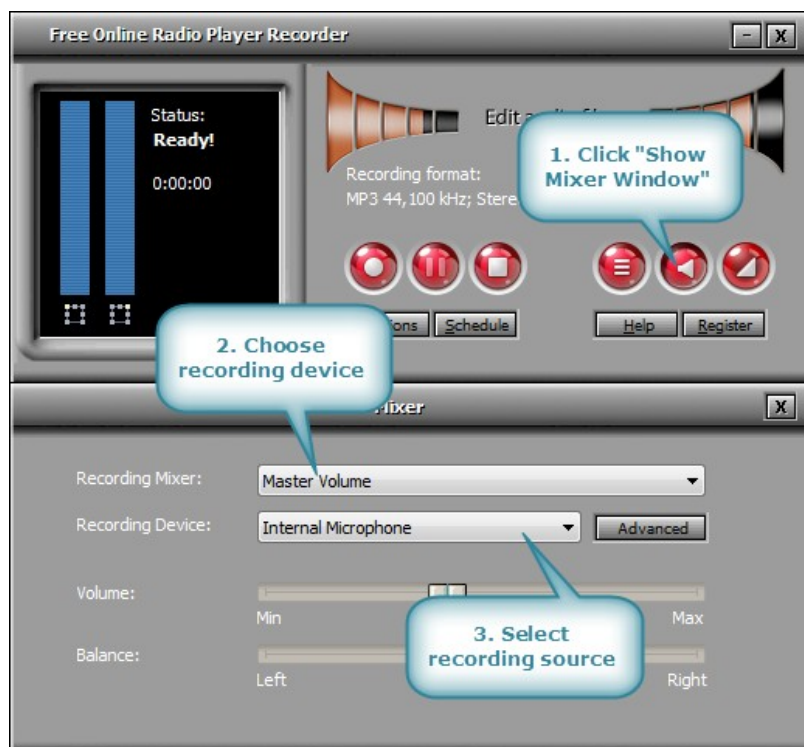

1. Start playing web radio & launch web radio recorder

First, you should click the down arrow on the radio player and **pick a radio station** from the dropdown menu. Then, click the "Play" button and the radio player will start buffering. Later on you can see the playing signal and hear the sound. Click the **"Record Online Radio"** button to activate the online radio recorder.

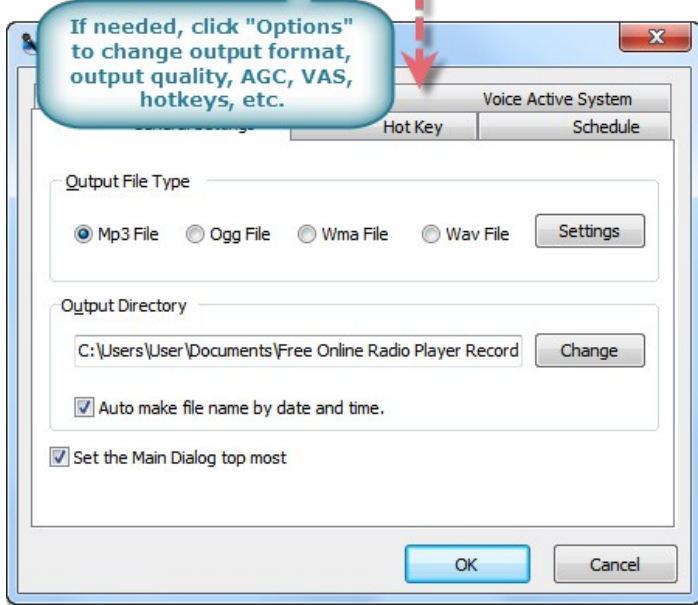

2. Set recording device & recording source

Click **"Show Mixer Window"** to select the proper sound source from the dropdown list within. The names of the sound sources to record streaming audio may be different in various operating systems, usually named Stereo Mix, Wave, What You Hear or something like that. The proper Volume & Balance of the recording is pre-defined for each source.

3. Start recording

Start recording and wait (If you need to change settings of output format, output quality, AGC, VAS, hotkeys, etc., click **"Options"**). To quit recording, click "Stop recording" and the recorded sound will be directly output to the output folder & listed in the file list with detailed info like filename, location, date, duration & size. You can play the recording with the built-in player. Right-click on the added file and select "Open the folder where the file is stored" to directly open the output folder - that means you don't even have to change the default output directory as the files can be quickly found.

## How to Record Online Free Music - Record any song in the world for free!

Want to enjoy some cool music through **Grooveshark** & record them? No problem.

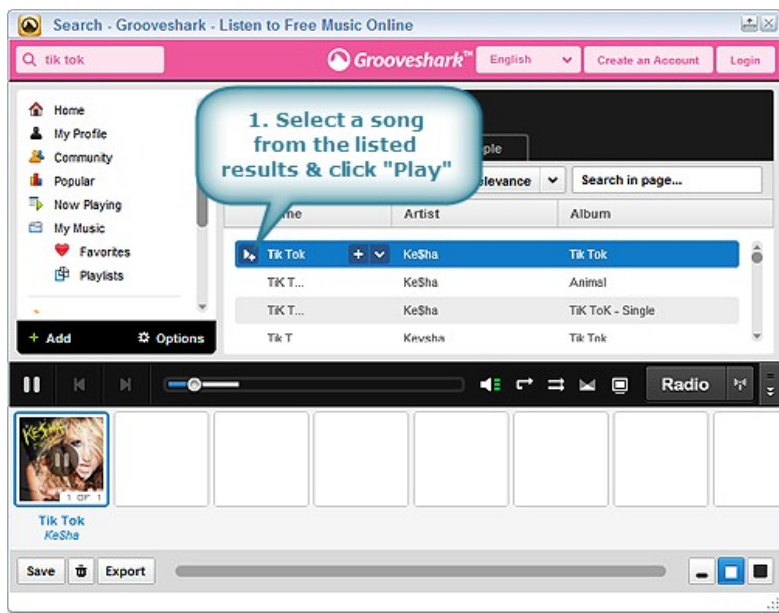

1. Launch Grooveshark and find the song you want

Grooveshark is truly the easiest way to **discover, share and listen to music online**. Click the Grooveshark button on the toolbar to launch it. Enter the song or artist you want to find into the search box & search it.

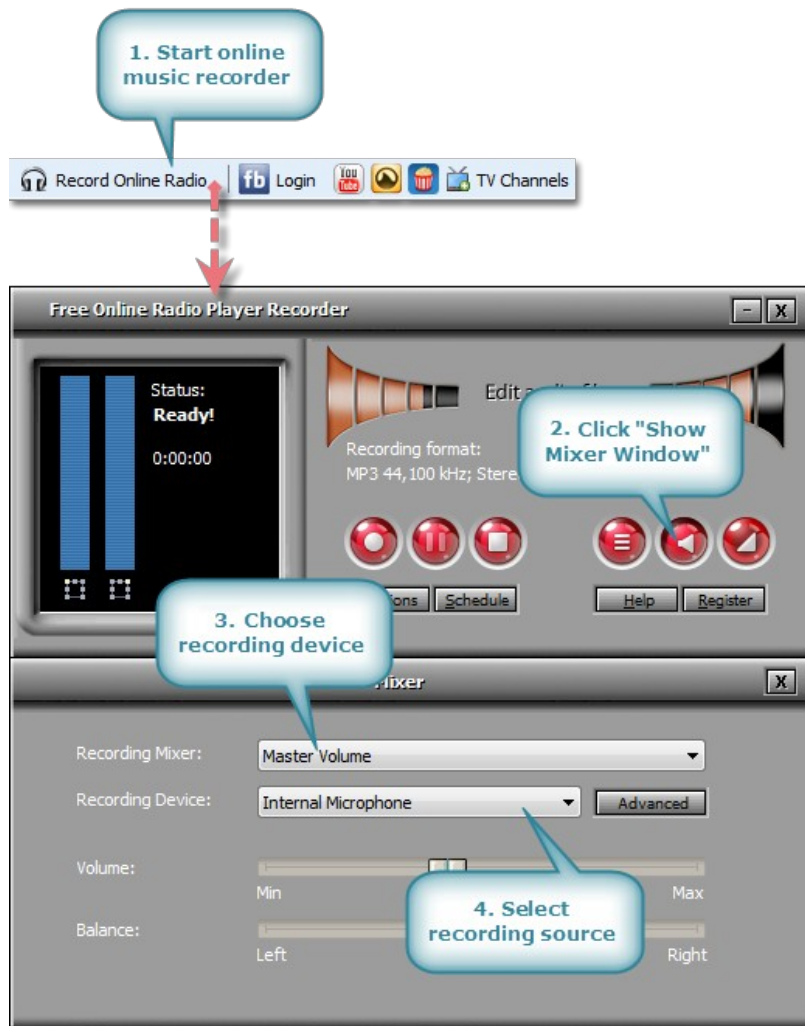

2. Play the selected song

The searching results will be listed. Click the "Play" button before each song and a built-in player will start buffering to the song.

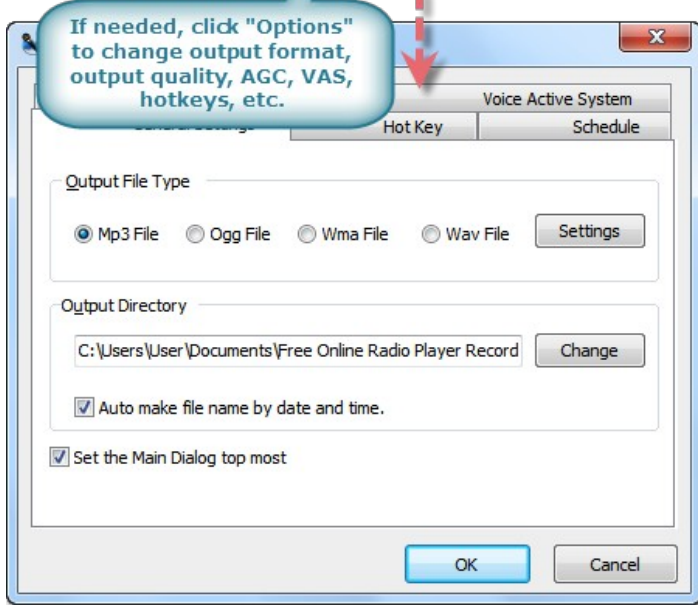

3. Launch online music recorder & set recording device/source

Click the "Record Online Radio" button to activate the online music recorder. Use "Show Mixer Window" button to select the proper sound source from the dropdown list within. The names of the sound sources to record streaming audio may be different in various operating systems, usually named Stereo Mix, Wave, What You Hear or something like that. The proper Volume & Balance of the recording is pre-defined for each source.

#### 4. Start recording

Start recording and wait (If you need to change settings of output format, output quality, AGC, VAS, hotkeys, etc., click "**Options**"). To quit recording, click "Stop recording" and the recorded sound will be directly output to the output folder & listed in the file list with detailed info like filename, location, date, duration & size. You can play the recording with the built-in player. Right-click on the added file and select "Open the folder where the file is stored" to directly open the output folder - that means you don't even have to change the default output directory as the files can be quickly found.

*Grooveshark* is an internationally online music search engine, music streaming service and music recommendation web software application, allowing users to search for, stream and upload music free of charge that can be played immediately or added to a playlist.

## How to Edit Audio Files

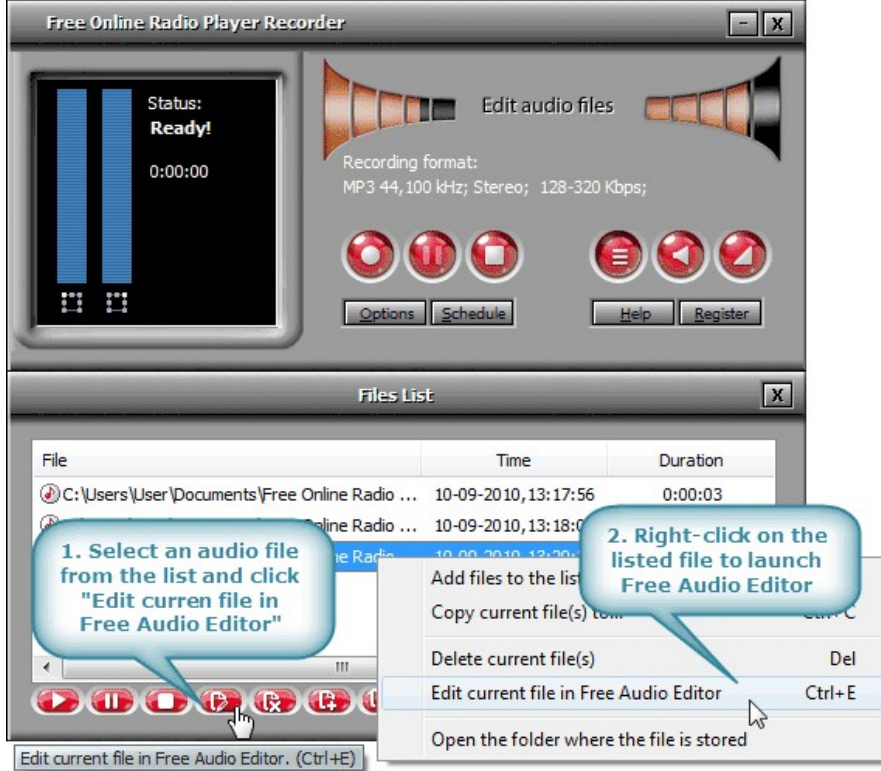

When you have finished recording, the created sound file will be automatically added to the file list. You can also input more audio files to the list. To perfect these music files for various usages, you need to edit them.

### 1. Launch Free Audio Editor

Option 1: Select an audio file from the list and click the "**Edit current file in Free Audio Editor**" button below.

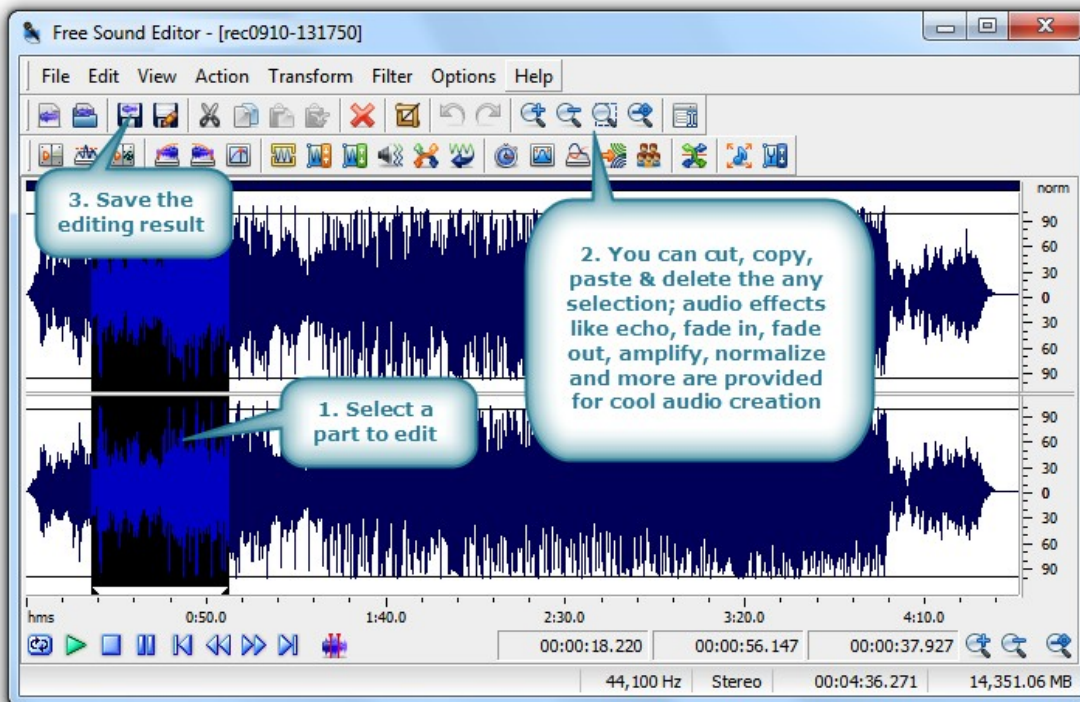

Option 2: **Right-click** on the listed file which you want to edit and choose "Edit current file in Free Audio Editor" from the menu.

Option 3: Use keyboard shortcut, **Ctrl+E**, to activate Free Audio Editor.

## 2. Edit audio file

Now the selected audio file is imported to the Free Audio Editor, with its waveform displayed. With this visual music editing tool, you can easily enhance your recording and other sound files. You can cut, copy, paste & delete any selection; audio effects like echo, fade in, fade out, amplify, normalize and more are provided for cool audio creation; what's the best, you don't have to worry about little mistakes as we provide unlimited UNDO/REDO operation. When you have finished the editing, you just need to click "Save" to choose quality settings & save the result.
